

Knight-Celotex is now a proud supporter of the Green Building Initiative.

In Knight-Celotex continuing efforts to be leaders in the Green Building movement™, we are proud to announce that we have become official supporters of the Green Building Initiative™ (GBI). The Green Building Initiative™ (GBI) promotes practical green building approaches to energy efficient and environmentally sustainable building practices commonly referred to as “Green Building”. The GBI works closely with the National Association of Home Builders to bring “Green Building” to residential construction through environmentally progressive, but also practical and affordable approaches.

The GBI introduced Green Globes™ into the US in 2005 as the first web-based building rating system with the goal of promoting green building practices to mainstream builders and designers in the commercial market. Green Globes™ is useful not only as a credible rating system but as an integrated design and education tool. GBI is the only green building organization accredited by the American National Standards Institute (ANSI) as a standard developer and is currently taking Green Globes™ through the ANSI process, which will maintain the integrity of Green Globes™ as a consensus standard and will facilitate continuous improvements to the Green Globes™ protocol.

As a supporter of the GBI Knight-Celotex will remain a leader in the green building movement and maintain our high standards as the largest fiberboard manufacturer in the world.
